Accurate stock taking saves time and money!

KwikInventory is a bar code based inventory accounting and inventory management program. It makes extensive use of the TriCoder portable bar code reader and bar code printing to make stock management fast and easy. Several user selectable levels of stock management solutions are available including:

- quick and easy physical stock takes,
- perpetual inventories,
- automatic reorder notification
- order tracking, and
- printing of inventory stock labels during receiving

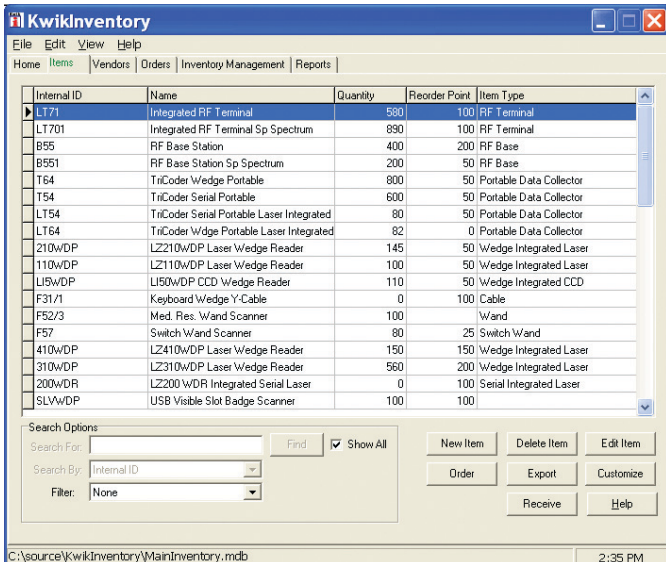

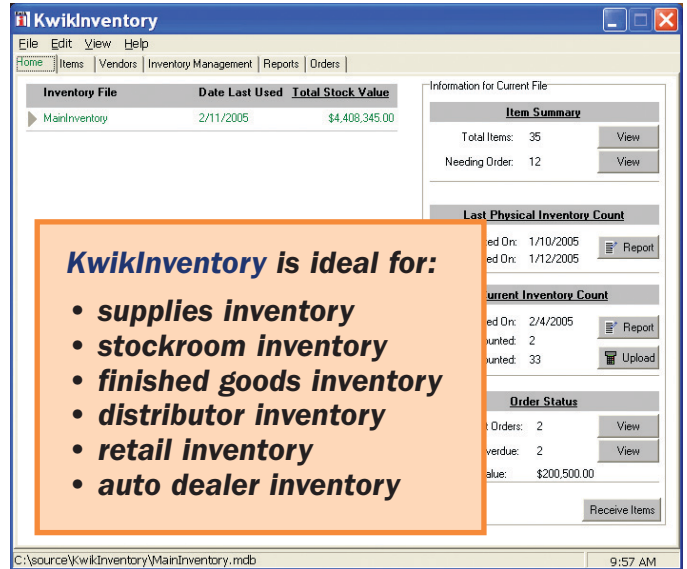

Use the **KwikInventory** program to perform only simple periodic physical stock takes or use all of the powerful features - whatever options you choose to use, **KwikInventory** will help you get the job done. You can start simple and grow into the advanced features as you master each step; you are not locked into just one type of stock taking process.

Bar codes make the job easier...

As one of the premier bar code equipment manufacturers, we have made sure that bar coding is integrated with the **KwikInventory** software to maximize your ease of use. The USB TriCoder portable bar code reader is used to quickly and accurately take physical stock takes, record receipts, and capture issues or sales. Once data is collected in the TriCoder reader, you take it to the computer where **KwikInventory** is running and upload the data via USB port to the **KwikInventory** files.

Bar code label printing

We have made even the labelling of items simple! Using our thermal transfer bar code printers to print labels during receiving, you can look up the vendor's outstanding orders or the purchase order number, receive each line item and print exactly the number of labels as the number of each item received. (If your items are already labeled, the printer is not necessary).

Reporting

KwikInventory offers reporting on just about anything! Reporting is available for Items, Vendors, Physical Inventory Counts, Orders in System, etc. **KwikInventory** will alert you to low stock levels, can track orders placed with vendors and maintain an accurate perpetual inventory.

Physical Inventory

After your database of stock numbers, description, cost, etc. has been entered into the **KwikInventory** program, complete a physical inventory by simply scanning each item counted (or scan each item and enter a quantity) into the TriCoder portable reader. Once you are finished scanning, connect the TriCoder to the PC using the USB cable and the data is uploaded into **KwikInventory**. You have the option to review the data before posting, noting any missing items or any significant discrepancies. After posting, you can get a report of your total stock by value.

Perpetual Inventory

By recording receipts and issues, you can know the current status of any item, as well as be alerted to the need to reorder on a daily basis. If you are using the Order Management option in KwikInventory, the receipts are automatically updated as an order is received.

Issues or sales can be tracked by using the TriCoder portable reader as a Point-of-Sale scanner; the TriCoder will transmit the data immediately to your POS or invoicing program, while storing the sales data for later batch updating of issues. (You could also simply scan items taken from stock for later updating).

Reorder Points

You can set reorder points based on usage estimates, lead times, and safety stock requirements. The program can then flag (in color) all items that need reordering.

Internal ID	Name	Quantity	Reorder Point
124883	Widgets	423	500
124945	Gadgets	379	400
124999	3/4" Copper Tubing	315	350
125876	5" Collars	28	50
125882	4" Joints	67	70
125891	Compound W	15	25
125903	2" Single Valve	24	25
125914	Double Valve	18	15
125919	Sheath Cover	35	20

Order Management

If you choose, you can track orders by vendor and by item. All reorder calculations will include what is already on order and scheduled for delivery. You can get reports on what you need to order, what orders are late, and when each order is expected.

A KwikInventory package for every need

Do all of your items arrive pre-labeled? Then Package 1 (software and TriCoder only, no label printing, single user) should meet your stock management requirements perfectly!

If you need to have one user working on re-ordering and stock levels, and someone else receiving orders and printing labels, then you need the Client/Server version of **KwikInventory™** included with packages 2 and 3.

If some items come pre-labeled but not others, and you need to print a fairly low volume of labels, Package 2 was designed just for you! This package includes the small-footprint Datamax E4203 Thermal Transfer printer and the LabelRIGHT Thermal for Windows software. With this package, printing is now integrated with the KwikInventory software, making labelling seamless.

Need to print a lot of labels? Want one-handed scanning with your TriCoder? Package 3 features the industrial-strength Citizen CLP-7202E Thermal Transfer printer (holds an 8" diameter roll of labels) and the TriCoder with Integrated laser scanner for one-handed scanning. No separate scanner to attach to the TriCoder, just point and press the button with one hand!

Best of all, the **KwikInventory™** software, the printers, labels, and the bar code readers are available from one source - Worth Data, a leading manufacturer of PC related bar code readers and labelling software. Call us and find out just how easy stock management can be!

Requirements for KwikInventory:

- a Pentium PC running Windows 98SE, NT, 2000, XP, or ME.
- A USB TriCoder, version 3 and above

*Windows® is a registered trademark of Microsoft Corp.

£287
€423

for single user license
Software only.
